Aided language development

Gayle Porter

Short Abstract

This workshop will share current research, clinical and client perspectives on interventions using graphic symbol communication aids and devices to support the development and autonomous use of language from first words to complex syntax. The primary purpose of language, to understand others and be understood, and the   role of pragmatics in language development will be discussed. Topics will include vocabulary selection and organisation in AAC graphic symbol systems, creating aided language learning environments and interactions to support aided language development and use for autonomous communication.
